

SYSTEM, METHOD, AND ARTICLE OF MANUFACTURE FOR A KNOWLEDGE MANAGEMENT TOOL

ABSTRACT

A system, method and article of manufacture are provided for managing data across an enterprise. A request for information is received from a user. Data relating to the user request is searched for in at least two geographically separated information repositories. The results of the search are presented to the user. The user is allowed
5 to browse through additional data of the information repositories. Links between data items and other data entries in the information repositories are created according to relationships the data items have to the other data entries.
